### Research Summary

A press-fit connector, also known as a press-fit terminal or press-fit pin, is an electrical or mechanical component used in the assembly of printed circuit boards (PCBs). Unlike traditional soldering methods, a press-fit connector is designed to be pressed or force-fitted into the corresponding holes on a PCB without the need for solder. The connector typically consists of a metal pin or terminal with features that grip onto the PCB through a tight interference fit. This press-fit technology offers advantages such as improved mechanical stability, reduced thermal stress on components, and the elimination of the soldering process, which can be especially beneficial in certain manufacturing environments. Press-fit connectors are commonly employed in industries where reliability, ease of assembly, and the ability to handle thermal cycling are crucial factors.

The major global manufacturers of Press Fit Connector include TE Connectivity, Samtec, Amphenol, Molex, JAE, Hirose, Yamaichi, HARTING, JST, ERNI, Fujitsu, etc. The global players competition landscape in this report is divided into three tiers.
