Research Summary

Press fit machines are industrial tools designed for the assembly of components, particularly in the field of manufacturing and electronics. These machines use a press-fit process, where parts are joined together through controlled force without the need for traditional welding or soldering. Press fit technology involves inserting one component into another with precision and force, creating a secure and durable connection. Press fit machines are commonly employed in applications such as printed circuit board (PCB) assembly, automotive manufacturing, and other industries where a reliable, interference-fit connection is essential. These machines often utilize hydraulic or pneumatic systems to exert the required force for press fitting, ensuring consistent and repeatable results in the assembly process. The use of press fit machines contributes to increased efficiency, reduced thermal stress on components, and improved overall product quality in various manufacturing processes.

The major global manufacturers of Press Fit Machines include TE Connectivity, Eberhard, UMG Technologies, Lazpiur, SYNEO, Harmontronics, Autosplice, Ept GmbH,
