Research Summary

Press Pack IGBTs (Insulated Gate Bipolar Transistors) are a type of power semiconductor device designed to handle high-voltage and high-current applications, typically used in industrial power electronics, such as motor drives, renewable energy systems, and traction systems. Unlike traditional IGBTs, which use wire-bonding connections, press-pack IGBTs feature a compact, pressurized assembly that provides superior thermal performance and mechanical reliability. The press-pack design ensures that the device's components, such as the semiconductor chip, are under pressure, improving heat dissipation and reducing the risk of failure due to thermal expansion. These characteristics make press-pack IGBTs highly suitable for applications requiring high power density and efficiency, where efficient thermal management is crucial. They are commonly found in applications like high-power converters, inverters, and electrical grids, where robust performance and longevity are essential for reliable operation in demanding environments.

The major global manufacturers of Press Pack IGBTs include Infineon Technologies, Hitachi Energy, Littelfuse (IXYS), Zhuzhou CRRC Times Electric, Littelfuse (IXYS),

Mitsubishi Electric (Vincotech), Poseico S.p.A., etc. The global players competition landscape in this report is divided into three tiers.
