### Research Summary

A pressing machines is a mechanical device used to apply pressure and shape materials or parts during manufacturing and production processes. These machines use hydraulic, pneumatic or mechanical force to compress, shape or form materials such as sheet metal, plastics, fabrics and composites. Ironing machines come in various types and configurations, depending on the specific application and materials being processed. Common types of ironing machines include hydraulic presses, mechanical presses, pneumatic presses, and heat presses. Hydraulic presses use hydraulic fluid to generate high pressure forces for pressing operations, while mechanical presses use mechanical mechanisms such as gears and flywheels. Pneumatic presses rely on compressed air to apply force, while heat presses combine pressure and heat for applications such as thermal transfer. Ironing machines are widely used in industries such as automotive, aerospace, metalworking, textiles, plastics and woodworking for tasks such as forming, stamping, molding, embossing, laminating and joining materials. They are critical tools for achieving precision, efficiency and consistency in manufacturing processes in various fields.
