Research Summary

A pressure infusor is a medical device used to administer intravenous (IV) fluids or blood products to patients by applying controlled pressure to a fluid bag. This device is particularly useful in situations where a rapid or consistent infusion rate is required, such as during emergency medical procedures or in critical care settings. The pressure infusor typically consists of a durable, inflatable cuff that surrounds the IV bag, and once inflated, it exerts external pressure on the fluid container. This pressure promotes a faster and more controlled flow of fluids through the IV tubing, facilitating the prompt delivery of essential medications, fluids, or blood to the patient. Pressure infusors are commonly employed in operating rooms, emergency departments, and ambulances, where quick and precise fluid administration is crucial for patient care.

The major global manufacturers of Pressure Infusor include BD, Smiths Medical, Merit Medical Systems, Sarstedt, 3M, Armstrong Medical, VBM Medizintechnik, Sun-Med, Wego Group, ERKA, Sujia, Rudolf Riester, Biegler, AC Cossor & Son, Nuova, etc. The global players competition landscape in this report is divided into three tiers.
