Research Summary

A pressurized metered dose inhaler (pMDI) is a medical device used for delivering medications directly into the lungs for the treatment of respiratory conditions such as asthma and chronic obstructive pulmonary disease (COPD). It consists of a canister filled with a specific medication in a liquid or suspension form, a metering valve, and a mouthpiece. When activated, the metering valve releases a precise dose of medication in aerosol form. The user inhales the medication, allowing it to reach the lungs and provide rapid relief or long-term control of respiratory symptoms. pMDIs are portable, convenient, and widely used, but proper inhalation technique is essential for optimal drug delivery. These inhalers are often prescribed with bronchodilators, corticosteroids, or combination medications to manage respiratory conditions effectively.

The major global manufacturers of Pressurized Metered Dose Inhaler include Glenmark Pharmaceuticals, Novartis International, Propeller Health, AstraZeneca, Philips Respironics, Teva Pharmaceutical Industries, Opko Health, Merck, BioCare Group, etc. The global players competition landscape in this report is divided into three tiers.
