### Research Summary

A primary lithium battery is a type of non-rechargeable battery that utilizes lithium in its electrochemical reactions to generate electrical power. These batteries are designed for single-use applications and are known for their long shelf life, high energy density, and reliability. Primary lithium batteries are commonly found in devices with low to moderate power consumption, such as cameras, medical devices, and certain types of electronic gadgets. They come in various forms, including coin cells, cylindrical cells, and specialized configurations, each tailored to specific applications. Due to their stable voltage output and the absence of self-discharge, primary lithium batteries are favored for long-term storage and usage in devices where a continuous and reliable power supply is essential.
