Research Summary

A Print and Apply Labelling Machine (PALM) is a type of labeling system used in packaging and product identification applications to print variable data such as barcodes, serial numbers, and product information onto labels and then automatically apply those labels to products or packaging. PALM systems typically consist of a printer, applicator, and control unit integrated into a single machine. The printer prints the variable data onto labels using methods such as thermal transfer or direct thermal printing. The labels are then automatically dispensed and applied to products or packaging by the applicator, which may use techniques such as pneumatic, tamp, or blow-on application. PALM systems offer several benefits, including high-speed printing and application, accurate label placement, and the ability to handle various label sizes and shapes. They are commonly used in industries such as food and beverage, pharmaceuticals, logistics, and manufacturing, where labeling requirements are diverse and demanding. PALM systems streamline the labeling process, improve efficiency, and ensure product traceability and compliance with labeling regulations.

The major global manufacturers of Print and Apply Labelling Machine (PALM) include Markem-Imaje, Videojet, Domino, Cotao, Weber Packaging Solutions, Arca Etichette, Pro Mach, CAB, Evolabel, Novexx, Label Aire, Etipack, Logopal, Espera-Werke, Guangdong Gosunm, XRH, ALTECH, Quadrel Labeling Systems, etc. The global players competition landscape in this report is divided into three tiers.
