Research Summary

A printing blanket is a crucial component in offset printing, a widely used printing technique. It is a rubber-covered fabric sheet that serves as an intermediary between the printing plate and the substrate, typically paper. The printing blanket transfers the inked image from the plate to the paper or other printing material during the offset printing process. The blanket's rubber surface is designed to conform to the texture of the printing plate and then transfer the ink uniformly to the printing surface. Printing blankets play a significant role in maintaining print quality, ensuring consistent ink distribution, and preventing direct contact between the plate and the substrate. They are available in various materials, such as rubber or composite materials, and can be designed for specific printing applications, contributing to the efficiency and precision of offset printing.

The major global manufacturers of Printing Blanket include ContiTech, Flint Group, Fujikura Rubber, Kinyosha, Meiji Rubber & Chemical, HabasitACOMA, BIRKAN, Prisco Group, Maniar Rubber Industries, Chiorino, Norisprint, etc. The global players
