### Research Summary

Prisms are geometric optical elements with flat, polished surfaces that refract or reflect light. They have specific shapes, such as triangular, rectangular, or pentagonal, and are commonly made from glass, plastic, or other transparent materials. Prisms play a crucial role in optics, where they are used to manipulate and control the path of light. Depending on their design, prisms can perform various functions, including dispersing light into its spectral components, rotating the orientation of an image, or reflecting light at specific angles. Prisms are integral components in optical systems such as cameras, binoculars, and spectrometers, contributing to image stabilization, color correction, and other optical phenomena. Their ability to alter the direction of light makes prisms valuable tools in scientific research, photography, and various optical applications.

The major global manufacturers of Prisms include Edmund Optics, Precision Optical, A. Optical, CeNing Optics, Sydor Optics, Tower Optical Corporation, LENSEL OPTICS, FOCtek, Giai photonics, Taiyo Optics (Dongguan) Corp, Plant For Optics, SwissOptic, Control Optics Taiwan, G?H, Sherlan, etc. The global players competition landscape in this report is divided into three tiers.
