Research Summary

Processed cheese, often known as cheese product or cheese food, is a type of cheese that undergoes additional processing to improve its shelf life, meltability, and texture. It is typically made by blending natural cheese with emulsifying agents, flavorings, preservatives, and sometimes additional dairy ingredients. This mixture is then heated and melted, allowing for easy shaping and packaging. Processed cheese is available in various forms, including slices, blocks, and spreads. While it may lack the complex flavors and textures of natural cheeses, processed cheese is favored for its convenience and versatility, especially in applications like sandwiches, dips, and sauces.
