Research Summary

Product Carbon Footprint (PCF) software is a specialized tool designed to measure, track, and manage the carbon emissions associated with the lifecycle of a product. This software calculates the total greenhouse gas emissions from the production, transportation, use, and disposal of a product, based on data inputs such as raw materials, energy consumption, manufacturing processes, and transportation logistics. By using this data, the software helps businesses identify areas for improvement, optimize processes, and reduce environmental impact. PCF software is widely used by companies aiming to meet sustainability goals, comply with environmental regulations, and communicate their environmental performance to consumers, often supporting efforts to reduce carbon footprints and enhance supply chain transparency.
