Research Summary

A proportional valve is a type of control valve that regulates fluid flow in proportion to an external signal. Unlike on/off valves, proportional valves provide variable and precise control over the flow rate, allowing for intermediate positions between fully open and fully closed. These valves are commonly used in industrial applications, such as hydraulic and pneumatic systems, where precise and adjustable control of fluid flow is essential. Proportional valves typically operate based on electrical or electronic signals, converting input signals into proportional adjustments of the valve opening. This technology is crucial in applications that demand accurate and responsive control, such as in automation, manufacturing, and other systems where the regulation of fluid flow or pressure is critical for optimal performance.

The major global manufacturers of Proportional Valve include Parker, Eaton, Bosch Rexroth, Emerson ASCO, Kendrion, Burkert, IMI, Nachi, SMC, Daikin, Nikkoshi, Humphrey, Festo, ODE, Takano, Sincere, Anshan Electromagnetic Valve, Dofluid, Takasago Electric, etc. The global players competition landscape in this report is
