### Research Summary

Propylene oxide is a highly reactive and flammable organic compound with the chemical formula  $C_3H_6O$ . It is an epoxide, meaning it contains a three-membered ring consisting of two carbon atoms and one oxygen atom. Propylene oxide is a key industrial chemical used primarily in the production of polyurethanes, which are versatile polymers employed in various applications, including foams, coatings, and adhesives. The compound is also utilized in the manufacture of propylene glycol, a common ingredient in antifreeze and various products in the pharmaceutical and cosmetic industries. Propylene oxide's reactivity stems from its epoxide ring, making it valuable in organic synthesis for the creation of a wide range of chemicals. However, its use and handling require careful attention due to its flammable nature and potential health hazards.

The major global manufacturers of Propylene Oxide include DuPont, Lyondellbasell, Shell, BASF, Huntsman, AGC Chemicals, Tokuyama, Repsol, Sumitomo Chemicals, SKC, etc. The global players competition landscape in this report is divided into three tiers.
