Research Summary

A protective helmet is a safety headgear designed to provide impact protection and reduce the risk of head injuries in various activities and industries. Helmets are constructed with durable materials such as hard plastics, fiberglass, or composites and often include an inner lining made of foam or other energy-absorbing materials. The design of protective helmets varies based on their intended use, ranging from industrial settings and construction sites to sports and recreational activities. Helmets commonly feature a rigid outer shell to distribute impact forces, an impact-absorbing liner to cushion the head, and an adjustable harness or suspension system for a secure and comfortable fit. Whether worn by construction workers, cyclists, motorcyclists, or athletes in contact sports, protective helmets are a crucial component of personal protective equipment, providing a vital layer of defense against head injuries caused by falls, collisions, or impacts.
