Research Summary

Prototyping software refers to tools and applications designed to create interactive and visual representations of a software product's user interface and functionality during the early stages of the development process. These prototypes serve as tangible models that enable developers, designers, and stakeholders to visualize the key features and interactions of a software application before the actual coding and development work begins. Prototyping software allows for quick and iterative testing of design concepts, user interfaces, and user experiences, helping to identify potential issues, gather feedback, and make informed decisions early in the development lifecycle. These tools often offer drag-and-drop functionality, pre-built design elements, and the ability to simulate user interactions, providing a dynamic and collaborative environment for refining and validating software designs. Prototyping software is widely used in various industries to streamline the development process, enhance communication among team members, and ensure that the final software product meets user expectations and requirements.

The major global suppliers of Prototyping Software include InVision, Adobe, Marvel, Axure, UXPin, Fluid UI, Moqups, Proto.io, Balsamiq, Flinto, iRise, Framer, Sketch, Pidoco, etc. The global players competition landscape in this report is divided into three tiers.
