Research Summary

A PSA (Pressure Swing Adsorption) oxygen generator is a medical device designed to produce high-purity oxygen for various applications, particularly in healthcare settings. It utilizes the principle of adsorption to separate nitrogen and other trace gases from ambient air, leaving behind a concentrated stream of oxygen. The process involves two alternating chambers filled with adsorbent material, such as zeolite molecular sieves. When air is passed through one chamber, nitrogen is adsorbed, allowing oxygen to pass through as a product gas. The second chamber is simultaneously depressurized, releasing the adsorbed nitrogen and preparing the chamber for the next cycle. This cyclic process enables the continuous production of oxygen with high purity levels, typically exceeding 90%. PSA oxygen generators are widely used in hospitals, clinics, and other healthcare facilities to supply a reliable source of medical-grade oxygen for patients in need of respiratory support, as well as in industrial applications where high-purity oxygen is required.

The major global manufacturers of PSA Oxygen Generator include Inogen, Yuyue

Medical, NGK Spark Plug, Invacare, Teijin Pharma, Philips, Linde, Atlas Copco, DeVilbiss Healthcare, Delta P, ResMed, Pacific Consolidated Industries, Air Water Group, O2 Concepts, Beijing Shenlu, Novair Medical, Oxymat, Inmatec, etc. The global players competition landscape in this report is divided into three tiers.
