Research Summary

The PSA test, or Prostate-Specific Antigen test, is a blood test commonly used in the diagnosis and monitoring of prostate health, particularly for the detection of prostate cancer. PSA is a protein produced by the prostate gland, and its levels can be elevated in the blood due to various conditions, including benign prostatic hyperplasia (BPH) and prostate cancer. During the PSA test, a small blood sample is taken, and the concentration of PSA in the blood is measured. While elevated PSA levels can indicate potential prostate issues, including cancer, it is important to note that an increased PSA level does not necessarily confirm the presence of cancer, and further diagnostic procedures such as a biopsy may be needed for a definitive diagnosis. The PSA test is a valuable tool in prostate cancer screening, and its interpretation is often done in conjunction with other clinical factors to guide healthcare professionals in making informed decisions about further investigation or treatment.

The major global manufacturers of PSA Test include Abbott, Siemens Healthcare, DiaSorin, Roche, Beckman Coulter, PerkinElmer, Tosoh, Ortho Clinical, Fujirebio, Mediwatch, BodiTech, etc. The global players competition landscape in this report is
