Research Summary

PTC resettable fuses, or polymeric positive temperature coefficient fuses, are electronic devices designed to protect electronic circuits from overcurrent conditions. These fuses are made from a polymer material with positive temperature coefficient characteristics, meaning that their electrical resistance increases significantly with temperature. In normal operating conditions, the PTC resettable fuse has a low resistance, allowing current to flow through the circuit. However, in the event of an overcurrent or a short circuit, the PTC fuse self-heats due to the increased current, causing its resistance to rise dramatically and limiting the current flow. Once the fault is cleared, the PTC fuse cools down, and its resistance decreases, effectively ?resetting? the fuse for normal operation. PTC resettable fuses are widely used in electronic devices and circuit protection applications as a more convenient and reliable alternative to traditional fuses, offering the advantage of automatic resetting without the need for replacement after a fault is cleared.

The major global manufacturers of PTC Resettable Fuses include Littelfuse, Schurter,

Bourns, Eaton, TDK, Amphenol Advanced Sensors, Polytronics Technology, Vishay, Murata Manufacturing, Bel Fuse, Yageo, Wayon, HuaXingAn Electronics, etc. The global players competition landscape in this report is divided into three tiers.
