Research Summary

A PTCA (Percutaneous Transluminal Coronary Angioplasty) balloon catheter is a medical device used in interventional cardiology to treat coronary artery disease. This catheter is specifically designed for angioplasty procedures, a minimally invasive technique to widen narrowed or obstructed coronary arteries. The PTCA balloon catheter consists of an inflatable balloon at its tip, which is positioned at the site of a narrowed artery. During the procedure, the balloon is inflated to compress the atherosclerotic plaque and stretch the artery, restoring blood flow to the heart muscle. PTCA balloon catheters may also have stents mounted on them, providing structural support to keep the artery open after inflation. This catheterization technique is a common and effective method to alleviate symptoms of angina, improve blood flow, and enhance overall cardiac function, reducing the need for more invasive coronary procedures like coronary artery bypass grafting.

The major global manufacturers of PTCA Balloon Catheter include Boston Scientific, Abbott, Medtronic, Cardinal Health, Asahi Intecc, Terumo, MicroPort, Lepu Medical,
