### Research Summary

PTFE (Polytetrafluoroethylene) Copper Clad Laminate is a type of substrate material used in the fabrication of printed circuit boards (PCBs). PTFE is a high-performance polymer known for its excellent electrical insulating properties, thermal stability, and resistance to chemicals. In PTFE Copper Clad Laminate, a layer of copper is bonded to both sides of the PTFE sheet, forming a conductive surface for electronic components to be attached. The use of PTFE in PCBs is advantageous in applications requiring high-frequency signals, such as in microwave and radio frequency (RF) circuits, as it offers low dielectric loss and maintains stable electrical characteristics over a wide range of temperatures. This type of copper clad laminate is often chosen for its reliability in high-frequency and high-power applications where maintaining signal integrity is critical.

The major global manufacturers of PTFE Copper Clad Laminate include Rogers Corporation, Taconic, AGC Biologics, Chukoh, Shengyi Technology, Zhongying Science & Technology, etc. The global players competition landscape in this report is divided into three tiers.
