### Research Summary

PTFE (polytetrafluoroethylene) lined pipes and fittings are components used in corrosive and chemically aggressive environments where standard materials may not provide adequate resistance. In this construction, a seamless lining of PTFE, a highly inert fluoropolymer, is applied to the interior surface of pipes and fittings, creating a barrier that is resistant to a wide range of chemicals and extreme temperatures. This lining not only protects the piping system from corrosion but also ensures the integrity of the conveyed fluids. PTFE lined pipes and fittings find applications in industries such as chemical processing, pharmaceuticals, and petrochemicals, where the resistance to corrosive substances is crucial. The combination of the strength of the outer pipe material and the chemical resistance of the PTFE lining results in a durable and reliable solution for handling aggressive media while maintaining the mechanical properties required for structural integrity.

The major global manufacturers of PTFE Lined Pipes & Fittings include Mersen, BAUM, Crane ChemPharma & Energy, SGL Carbon, Corrosion Resistant Products (CRP),
