Research Summary

Pulmonary drug delivery systems are medical devices designed to administer medications directly to the lungs through inhalation. These systems are commonly used for the treatment of respiratory conditions such as asthma, chronic obstructive pulmonary disease (COPD), and cystic fibrosis, among others. The main goal of pulmonary drug delivery is to target the medication to the respiratory system, providing rapid onset of action and minimizing systemic side effects. Inhalation devices include pressurized metered-dose inhalers (pMDIs), dry powder inhalers (DPIs), and nebulizers, each delivering medication in a specific form (aerosolized particles or dry powder). Pulmonary drug delivery systems are preferred for certain medications as they allow for direct absorption into the bloodstream through the lungs, offering an effective and convenient route for delivering bronchodilators, corticosteroids, and other respiratory medications.

The major global manufacturers of Pulmonary Drug Delivery Systems include 3M, GSK, AstraZeneca, Cipla, Chiesi, Aptar, Boehringer Ingelheim, Novartis, Omron Healthcare,

Philips Respironics, PARI, Skyepharma, CareFusion, Shanghai Huarui, Taian Character, Chia Tai Tianqing, etc. The global players competition landscape in this report is divided into three tiers.
