Research Summary

Pulse oximeters are medical devices designed to measure the oxygen saturation level in a person's blood and their heart rate. They operate by emitting light through a patient's skin, typically at the fingertip, and detecting the amount of light absorbed by oxygenated and deoxygenated hemoglobin. The device provides a quick and non-invasive way to assess blood oxygen levels, a crucial parameter for monitoring respiratory health. Pulse oximeters are widely used in clinical settings, such as hospitals and ambulatory care, as well as in home healthcare environments. They are especially valuable for individuals with respiratory conditions like chronic obstructive pulmonary disease (COPD), asthma, or those recovering from surgery. The results, often displayed as SpO₂ (peripheral oxygen saturation) percentage, help healthcare professionals and individuals monitor oxygen levels and adjust treatments or interventions accordingly.

The major global manufacturers of Pulse Oximeters include GE Healthcare, Philips, Smiths Medical, Medtronic, Nonin Medical, Masimo, Delta Electronics, Acare Technology, Konica Minolta, Spencer, Solaris, Contec, Yuwell, ChoiceMMed, Heal
