Research Summary

The Purge and Trap Concentrator (PTC) is an analytical instrument used in environmental and chemical analysis to concentrate and extract volatile organic compounds (VOCs) from liquid samples or solid matrices. The process involves purging a sample with an inert gas, typically helium or nitrogen, to strip the volatile compounds from the sample matrix. The released VOCs are then trapped on an adsorbent material, usually activated charcoal or a similar material. After concentration, the trapped compounds are desorbed, often with the aid of heat, and transferred to a chromatograph for separation and detection. The Purge and Trap Concentrator is widely employed in environmental monitoring, water analysis, and quality control applications, offering enhanced sensitivity and selectivity for the detection of low concentrations of volatile organic compounds in complex sample matrices. This technique is valuable for compliance testing, research, and ensuring the safety of air and water quality.

The major global manufacturers of Purge and Trap Concentrator (PTC) include LabTech (CDS Analytical), Teledyne Tekmar, EST Analytical, OI Analytical (Xylem Analytics), TaiTong Technology, Beijing Tashi Deyan Instrument, Beijing Juxin Zhweifeng Technology, Beijing Zhongyi Yusheng Technology, etc. The global players competition landscape in this report is divided into three tiers.
