Research Summary

Photovoltaic (PV) modules, commonly known as solar panels, are devices designed to capture sunlight and convert it into electricity. These modules consist of interconnected solar cells made typically from crystalline silicon or other semiconductor materials. When exposed to sunlight, these cells generate a flow of direct current (DC) electricity through the photovoltaic effect. PV modules are structured with a protective layer of tempered glass on the front, encapsulation materials to shield the cells, and a backsheet for additional protection. They are the fundamental building blocks of solar energy systems, whether used in residential, commercial, or utility-scale installations. PV modules are key components in harnessing solar power for various applications, contributing to sustainable and renewable energy solutions worldwide.

The major global manufacturers of PV Modules include JA Solar, Yingli, Trina Solar, Canadian Solar, Kyocera Solar, Solar Frontier, Jinko Solar, SFCE, ReneSola, Hanwha Solar, REC Group, First Solar, SunPower, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry

position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
