Research Summary

PVB (polyvinyl butyral) emulsion refers to a stable dispersion of PVB resin in water, forming a milky liquid that can be applied as a coating or adhesive in various industrial applications. PVB is a synthetic polymer known for its adhesive and film-forming properties, and when emulsified, it becomes water-dispersible. PVB emulsion finds applications in industries such as coatings, adhesives, and textiles, where a water-based formulation is advantageous. In coatings, PVB emulsion is used to impart protective and adhesive properties to surfaces, while in adhesives, it serves as a bonding agent. The emulsion form facilitates easy application, drying, and film formation, making it suitable for applications where a water-based, environmentally friendly solution is preferred.

The major global manufacturers of PVB Emulsion include Aquaspersions, Shark Solutions, Chengdu Longcheng Gaoxin, etc. The global players competition landscape in this report is divided into three tiers.
