### Research Summary

A PVC (polyvinyl chloride) modifier is a substance added to PVC resins during the manufacturing process to enhance or modify the properties of the final material. These modifiers are incorporated to achieve specific characteristics such as improved flexibility, impact resistance, thermal stability, or flame retardancy. Common PVC modifiers include plasticizers, which enhance flexibility by reducing the rigidity of the polymer chains; impact modifiers, which improve resistance to impact and cracking; and stabilizers, which protect PVC from degradation caused by heat or ultraviolet (UV) light exposure. By selecting and combining different modifiers, manufacturers can tailor the properties of PVC to meet the requirements of various applications, from rigid pipes and fittings to flexible films, cables, and automotive components. The use of modifiers allows for a versatile range of PVC formulations suited to diverse industries and end-use applications.

The major global manufacturers of PVC Modifier include Kaneka, Dow, Arkema, DuPont, LG, Mitsubishi Rayon, Mitsui Plastics, Indofil, SCAPL, Construwel Industries,
