Research Summary

Pyrophyllite is a mineral belonging to the phyllosilicate group, characterized by its aluminum-rich composition. It has a distinctive platy or foliated structure and is often found in metamorphic rocks, particularly those subjected to low-grade metamorphism. The mineral typically ranges in color from white to shades of green, gray, or brown. Pyrophyllite is valued for its low expansion properties when heated, making it useful in ceramics, refractories, and as a filler in various industrial applications. Its properties include a softness that allows it to be easily carved, making it suitable for sculpting and carving purposes. Pyrophyllite is also used in the production of talcum powder, as a component in insecticides, and in the manufacturing of certain paints and coatings due to its unique physical and chemical characteristics.

The major global manufacturers of Pyrophyllite include China Jushi, Taishan Fiberglass, NFGF, ZheJiang LeiNa Micro Powder, CPIC, Trinity Resources, Shandong Fiberglass Group, Tsuchihashi Mining, Korea Refractories, SKKU, Wonderstone, etc. The global players competition landscape in this report is divided into three tiers.
