Research Summary

Quad-Flat-No-Lead (QFN) packaging is a type of surface-mount integrated circuit (IC) package commonly used in electronic devices. It is characterized by a flat, square or rectangular shape with leads that extend from the four sides of the package, providing a space-saving and efficient design. Unlike traditional dual in-line packages (DIP), QFN packages have no leads extending from the bottom, allowing for a smaller footprint and improved thermal performance. The leads, also known as pads, are located on the package's perimeter, facilitating easy soldering onto the surface of a printed circuit board (PCB). QFN packaging is popular in modern electronics, particularly in applications where space is a critical consideration, such as in smartphones, tablets, and other compact electronic devices. The design of QFN packages contributes to enhanced electrical performance, improved thermal dissipation, and simplified manufacturing processes.

The major global manufacturers of Quad-Flat-No-Lead Packaging (QFN) include
