Research Summary

Quartz monitor crystals, also known as quartz crystal monitors or QCMs, are specialized devices used in thin film deposition processes, particularly in vacuum coating or sputtering applications. These crystals are made of high-purity quartz and are designed to be sensitive to small mass changes on their surface. During the thin film deposition process, as material is deposited onto the quartz crystal, its mass increases, leading to a shift in the crystal's resonant frequency. By monitoring this frequency shift, researchers and engineers can precisely measure the rate of material deposition and control the thickness of the thin film being applied. Quartz monitor crystals play a crucial role in ensuring the accuracy and reproducibility of deposition processes in industries such as electronics, optics, and semiconductor manufacturing.

The major global manufacturers of Quartz Monitor Crystals include INFICON, Wanshi Electronics, Jiaying Jingkong Eletronic (JJK), Tieway Technology, Colnatec, Shalom Denshi Co., Ltd., Piezo Parts Co., Ltd., OTWOCOM (OTC), TAITIEN Electronics, etc. The global players competition landscape in this report is divided into three tiers.
