Research Summary

Radiant barrier and reflective insulation are energy-efficient materials used to control heat transfer in buildings and structures. Radiant barriers typically consist of a reflective material, often aluminum foil, that reflects radiant heat. When installed in attics, walls, or roofs, these barriers reduce radiant heat gain, especially in hot climates. Reflective insulation, on the other hand, combines a layer of reflective material with other insulating materials, such as foam or fiberglass, to provide a more comprehensive solution for reducing both radiant and conductive heat transfer. These materials are effective in minimizing heat absorption, making them valuable for improving energy efficiency in residential, commercial, and industrial buildings. Reflective insulation is commonly used in conjunction with traditional insulation to create a thermal barrier that enhances overall building performance by maintaining more consistent indoor temperatures and reducing energy consumption for heating and cooling.

The major global manufacturers of Radiant Barrier & Reflective Insulation include

DuPont, Reflectix, Innovative Insulation, Dunmore, Fi-Foil Company, BMI Group, LP, Covertech Fabricating, RESISTO, RadiantGUARD, LLFlex, Environmentally Safe Products, Prime Eneritech, Spunchem, Patidar, etc. The global players competition landscape in this report is divided into three tiers.
