Research Summary

Radiant tube heaters are heating systems that utilize infrared radiation to warm objects and surfaces in a space, providing efficient and focused heating. These heaters typically consist of a series of tubes, often made of stainless steel, that contain a combustion chamber. Natural gas or propane is burned in the combustion chamber, and the heat generated is radiated from the surface of the tubes. The infrared radiation emitted heats objects and people within the line of sight of the tubes, creating a comfortable and energy-efficient heating solution. Radiant tube heaters are commonly used in industrial and commercial settings, such as warehouses, garages, and manufacturing facilities, where directed and quick heating is desired. They offer benefits such as rapid response times, reduced heat loss, and the ability to zone heating in specific areas for optimal comfort and energy savings.

The major global manufacturers of Radiant Tube Heaters include Schwank, Detroit Radiant Products, Superior Radiant Products, Roberts Gordon, Tansun, Solaronics, Reznor, IR Energy, Gas Fired Products, Seeley International, FRICO, Advanced
