Research Summary

Radiation protection gloves are specialized gloves designed to shield the wearer's hands from exposure to ionizing radiation, such as X-rays and gamma rays. These gloves are commonly used in medical, dental, and industrial environments where workers are at risk of encountering hazardous radiation. Made from materials that contain lead or other radiation-absorbing substances, radiation protection gloves provide a barrier that attenuates the radiation, thereby reducing the dose received by the hands. The gloves are designed to offer both protection and dexterity, ensuring that users can perform their tasks effectively while minimizing their radiation exposure. Radiation protection gloves are essential for radiologists, technicians, and other professionals who handle radioactive materials or operate imaging equipment, contributing to safer working conditions and compliance with radiation safety regulations.
