### Research Summary

A radiation-resistant camera is a specialized imaging device designed to operate in environments with elevated levels of ionizing radiation, such as those found in nuclear facilities, radioactive material handling areas, or during certain medical procedures. These cameras are constructed with materials and components that can withstand radiation exposure without compromising their functionality or imaging quality. The design often includes shielding, such as lead or other radiation-absorbing materials, to protect the camera's sensitive electronic components from damage caused by radiation. Radiation-resistant cameras are crucial for tasks like monitoring and inspection in nuclear power plants, medical imaging during radiation therapy, and research applications where traditional cameras might fail or suffer degradation in the presence of ionizing radiation. Their robust construction ensures reliable performance and safety in environments where radiation levels pose a potential hazard to standard electronic equipment.

The major global manufacturers of Radiation Resistant Camera include Mirion
