### Research Summary

A radiation shielding door is a specialized door designed to provide protection against ionizing radiation in environments where radiation exposure needs to be minimized. These doors are commonly used in areas such as medical facilities, industrial sites, and nuclear installations. The construction of a radiation shielding door involves the incorporation of materials with high-density properties, such as lead or other heavy metals, to effectively absorb and block ionizing radiation, including X-rays and gamma rays. The door's design aims to prevent the penetration of radiation through its structure, ensuring the safety of individuals on either side. Radiation shielding doors are integral components in radiation therapy rooms, diagnostic imaging suites, and other settings where controlled exposure to radiation is a part of the operational environment. Their purpose is to create a secure barrier that minimizes the risk of radiation leakage, protecting both personnel and the surrounding environment.

The major global manufacturers of Radiation Shielding Door include ETS-Lindgren, NELCO Worldwide, Radiation Protection Products, MarShield, Ray-Bar Engineering,
