Research Summary

A radio modem is a communication device that facilitates the transmission of digital data over radio frequencies. It combines the functions of a modulator (to convert digital data into a modulated signal for transmission) and a demodulator (to recover the original data from the received modulated signal). Radio modems are commonly used in wireless communication systems to establish point-to-point or point-to-multipoint connections. They are employed in various applications, including remote monitoring, telemetry, industrial automation, and wireless networking. Radio modems can operate in different frequency bands and modulation schemes, providing flexibility to adapt to specific communication requirements. These devices are integral components in creating reliable and efficient wireless communication links for data transfer in diverse fields.

The major global manufacturers of Radio Modem include Digi, Campbell Scientific, SATEL, RACOM, RF DataTech, Raveon Technologies, Advantech B+B SmartWorx, Westermo, Warwick Wireless, ATIM, Radiometrix, ADEUNIS RF, etc. The global players competition landscape in this report is divided into three tiers.
