Research Summary

A Radiology Information System (RIS) is a specialized software system designed to manage and organize radiological imaging data and associated administrative tasks within a healthcare facility or radiology department. RIS streamlines various aspects of radiology workflow, including scheduling, patient registration, image tracking, reporting, and billing. It integrates with other healthcare information systems, such as Picture Archiving and Communication Systems (PACS), Electronic Health Records (EHR), and Hospital Information Systems (HIS), to facilitate seamless exchange of patient information and imaging data. RIS allows radiology staff to schedule appointments, manage patient records, track imaging exams, generate reports, and communicate with referring physicians efficiently. It also helps improve workflow efficiency, reduce errors, and enhance patient care by providing centralized access to relevant information and streamlining administrative processes.
