Research Summary

A RAID (Redundant Array of Independent Disks) controller card is a hardware device that manages and controls the operation of multiple disk drives in a RAID configuration. RAID is a storage technology that combines multiple physical drives into a single logical unit to enhance performance, data redundancy, or a combination of both. The RAID controller card, often installed in a server or storage system, handles the distribution of data across the connected drives and provides the necessary RAID functionalities, such as striping, mirroring, or parity calculations. It offloads the processing burden from the computer's main CPU, improving overall system performance. RAID controller cards come in various forms, including PCIe cards or integrated controllers on the motherboard, and they play a crucial role in optimizing data storage, ensuring data integrity, and improving the reliability and speed of storage systems in enterprise environments.

The major global manufacturers of RAID Controller Card include Broadcom, Intel, Dell, Microchip Technology, Lenovo, Fujitsu, HighPoint, Areca Technology, etc. The global
