### Research Summary

Rail transit friction by-products refer to the particulate matter generated as a result of the interaction between the train's wheels and the tracks during rail transit operations. This friction generates wear and abrasion on both the wheels and the rails, leading to the production of fine particles that can include metal dust, brake pad residue, and other wear debris. These by-products can become airborne or settle on nearby surfaces, posing environmental and health concerns. Monitoring and managing rail transit friction by-products are important considerations in rail maintenance and environmental management. Strategies may include implementing effective braking systems, utilizing materials with lower wear rates, and implementing measures to mitigate the dispersion of these by-products to minimize their impact on air quality and public health.

The major global manufacturers of Railroad Friction Products include Knorr-Bremse, Wabtec Corporation, Bremskerl, Akebono, FLERTEX, Tribo, Escorts Railway Division, EBC Brakes Group, TOKAI Carbon, Rane Group, Miba, MASU, Beijing Tianyishangjia New Material Corp, Beijing Puran Railway Braking High-Tech, CRRC, etc. The global
