Research Summary

A Railway Overhead Catenary System (OCS) is an electrification infrastructure used to provide electric power to trains. It consists of a network of overhead wires, usually supported by a series of catenary structures, that supply electrical power to the train through a pantograph or other contact system. The catenary wires are energized, and the train's electric components, such as motors, draw power from these wires. The OCS allows trains to operate without an onboard power source, such as diesel engines, by using electric traction. This electrification system is commonly used in urban and long-distance rail networks to reduce emissions, improve energy efficiency, and enable faster acceleration and braking. OCS technology has evolved over the years, with variations in wire types, support structures, and voltage systems depending on regional standards and specific railway requirements.

The major global manufacturers of Railway Overhead Catenary System (OCS) include CREC, CRCC, Siemens, Engie Ineo, Cobra, Alstom, Tianjin Keyvia, Colas Rail,

Furrer+Frey, Kummler+Matter, GCF, Sanwa Tekki, Salcef Group, Bonomi, EMSPEC, etc. The global players competition landscape in this report is divided into three tiers.
