Research Summary

Rainscreen cladding is an exterior cladding system used in building construction to provide a protective and aesthetically pleasing barrier against the elements. The system typically consists of an outer layer (the rainscreen) and an inner layer that acts as a secondary weather-resistant barrier. The outer layer, often made of materials such as metal panels, fiber cement, or high-pressure laminate, is designed to allow for ventilation and drainage, preventing water penetration while creating a gap between itself and the building structure. This gap, known as the "rainscreen cavity," helps manage moisture and allows for airflow, reducing the risk of water damage and promoting the drying of any water that may enter. Rainscreen cladding is known for its durability, energy efficiency, and architectural versatility, providing both functional and aesthetic benefits to buildings.

The major global manufacturers of Rainscreen Cladding include Cladding, Trespa North America, Centria International, Tata Steel(Kalzip), Kaicer(Lakesmere), Kingspan Insulation, Celotex, Ash & Lacy Building System, CGL Facades, Proteus, Rockwool International, Carea., Booth Muirie, etc. The global players competition landscape in this
