Research Summary

Rainwater filters are devices designed to remove impurities and debris from collected rainwater, ensuring that the harvested rainwater is clean and suitable for various uses. These filters are typically installed in rainwater harvesting systems to prevent leaves, twigs, sediment, and other contaminants from entering the storage tanks or distribution systems. There are various types of rainwater filters, including mesh filters, downspout filters, and first-flush diverters. Mesh filters trap larger particles, while downspout filters are installed in the downspouts to capture debris before it enters the storage tank. First-flush diverters direct the initial runoff away from the storage system, preventing the accumulation of pollutants that may be present on the roof. By incorporating rainwater filters into harvesting systems, the quality of collected rainwater is improved, making it suitable for purposes such as irrigation, flushing toilets, and other non-potable uses.

The major global manufacturers of Rainwater Filters include Kingspan, Watts, WISY, 3P Technik, AFRISO, Puretec, Boralit, ASIO, INTEWA, Filtrific, Envirogard (Rainfresh), Rainy, GMT International, Otto Graf GmbH, Glacier Filtration, Atlas Filtri, I Controls
