Research Summary

A Real-Time Clock (RTC) is an electronic device or integrated circuit that keeps track of the current time and date in real-time. Unlike a regular clock or watch, an RTC is not reset when power is lost, thanks to an onboard backup power source, often a small coin cell battery. RTCs are widely used in various electronic systems, such as computers, embedded systems, and microcontrollers, to provide a reliable timekeeping reference. They play a crucial role in applications that require accurate and continuous tracking of time, such as logging events, scheduling tasks, and timestamping data. RTCs are capable of maintaining accurate timekeeping over extended periods, even in the absence of external power, ensuring that the device always has access to the correct time and date information.

The major global manufacturers of Real Time Clock include STMicroelectronics, EPSON, Maxim Integrated, Microchip Technology, NXP, Texas Instruments, Renesas Electronics, DAPU TELECOM, ABLIC, Diodes, Abracon, NJR, etc. The global players competition landscape in this report is divided into three tiers.
