Research Summary

A Real-time Kinematic (RTK) machine refers to a system used in surveying, geodesy, and navigation that employs real-time satellite data and corrections to enhance the accuracy of positioning. RTK technology relies on satellite positioning systems such as GPS (Global Positioning System) or GNSS (Global Navigation Satellite System). The RTK machine receives signals from multiple satellites and a reference station, which provides correction data in real-time to improve the precision of the positioning information. This technology is commonly used in applications where high-precision and real-time location information is crucial, such as in land surveying, construction, agriculture, and autonomous vehicle navigation. RTK machines contribute to achieving centimeter-level accuracy in real-time positioning, making them valuable tools in industries that require precise spatial data for mapping, design, and navigation purposes.

The major global manufacturers of Real-time Kinematic (RTK) Machine include Trimble

Navigation, Topcon, Leica Geosystems, Novatel, Hemisphere, Hi-Target, South Group, Shanghai Huace Navigation Technology, Beijing Unistrong Science & Technology, etc. The global players competition landscape in this report is divided into three tiers.
