Research Summary

A Real-time Location System (RTLS) is a technology that enables the continuous and instantaneous tracking of the location of objects, people, or assets in real-time within a defined space. RTLS utilizes various technologies such as GPS (Global Positioning System), RFID (Radio-Frequency Identification), Bluetooth, Wi-Fi, and sensor networks to monitor and capture the real-time location data. The system provides accurate and up-to-the-minute information on the whereabouts of tracked items or individuals, offering valuable insights into their movements and interactions. RTLS finds applications in diverse industries, including healthcare for patient tracking, manufacturing for asset management, logistics for supply chain visibility, and smart buildings for space utilization. The real-time nature of RTLS enables organizations to enhance operational efficiency, optimize workflows, improve safety, and make data-driven decisions based on the dynamic location information.
