### Research Summary

A rebar coupler is a mechanical device used in construction to connect two steel reinforcement bars (rebars) end-to-end. These couplers are designed to replace the traditional method of overlapping rebars and provide a more efficient and cost-effective solution for reinforcing concrete structures. Rebar couplers are typically threaded on one or both ends and are installed by screwing onto the threaded portions of the rebars to create a strong and reliable mechanical connection. This method eliminates the need for time-consuming and labor-intensive processes like welding or manual tying of rebars. Rebar couplers contribute to faster construction times, reduce material waste, and enhance the overall structural integrity of reinforced concrete elements by ensuring a consistent and dependable connection between adjacent rebars. They are commonly used in applications such as building construction, bridges, tunnels, and other reinforced concrete structures.

The major global manufacturers of Rebar Coupler include nVent, Dextra Group, Tokyo Tekko, Peikko Group, Terwa, Sida Jianmao, CRH, Glus, Henglian, BARUS, Iron Man,
