Research Summary

A rebar grout sleeve is a component used in construction to create a mechanical connection between two reinforcing steel bars (rebars) while providing a pathway for grout to flow through. It is typically a tubular device made of materials such as plastic, steel, or other suitable alloys. The grout sleeve is designed with openings or perforations to allow the flow of grout into the sleeve, ensuring a solid and bonded connection between the adjoining rebars. The grout serves to enhance the load transfer and structural integrity at the connection point. Rebar grout sleeves are commonly used in applications where a reliable and efficient coupling of rebars is required, such as in the construction of reinforced concrete structures. They provide an alternative to traditional methods of connecting rebars, offering advantages such as ease of installation, reduced labor, and the ability to achieve consistent and high-quality connections.

The major global manufacturers of Rebar Grout Sleeve include Tokyo Tekko, Dextra Group, Leviat (CRH Plc), Splice Sleeve Group, Dayton Superior, Fuji Bolt Mfg, Reid,
