### Research Summary

Recessed lighting, also known as can lighting or downlighting, is a type of lighting installation where light fixtures are mounted into the ceiling or wall, creating a streamlined and unobtrusive appearance. These fixtures are set into the ceiling, leaving the actual light source hidden, and they typically consist of a housing, trim, and a bulb. Recessed lighting is popular for its ability to provide ambient or task lighting without occupying visual space, making it a versatile and aesthetic choice for various interior spaces. It is commonly used in residential, commercial, and architectural settings to highlight specific areas, illuminate rooms uniformly, or create a modern and minimalist lighting design. The flexibility in positioning and the range of available trims and bulb options contribute to the adaptability of recessed lighting in enhancing both functionality and aesthetics within a space.
