Research Summary

Rectangular enameled wire, also known as rectangular magnet wire, is a type of wire used in electrical applications where a flat or rectangular cross-sectional shape is preferred over the traditional round wire. This wire is typically made of copper or aluminum and is coated with a thin layer of enamel insulation to prevent short circuits. Rectangular enameled wire is commonly used in transformers, inductors, and other electromagnetic devices where space considerations and coil winding efficiency are crucial. The flat shape of the wire allows for better space utilization and increased packing density in coils, leading to improved performance and reduced size in certain applications. The enamel insulation ensures electrical insulation between turns and layers, enabling the wire to carry electrical currents effectively without the risk of short circuits.

The major global manufacturers of Rectangular Enameled Wire include Superior Essex, Sumitomo Electric, Dahr?n Group, Hitachi Metals, Elektrisola, REA, De Angelli, Ederfil Becker, Synflex Group, IRCE, Jingda, Ningbo Jintian Copper Group, Guancheng
